May 15, 1956

My dear Ronald: I am writing this as a father to his son. Blood relationship does not always show true physical likeness. You have来到 ideals for Poly as I cherished years before Poly was born, and for which I went to Harvard and to stem the tide of opposition for first few years. You are certainly dedicated to the advancement in a higher level for the attainment of our ideals of heart, head and hand training. I made my request for admission of P.A.P. 69th as a Department on a Branch in Applied and Sciences for establishing stories of educated men on the Farm. You have shown your knowledge of vision in the educational needs of youth that seemed to be just as with your two predecessors. They wish to do a good service especially in the eradication (which we have been trying to do for several years) and seek to change relationship. You know there are two doors wide open for you to work of rapid progress. Without accreditation and the blessing of the Synod of 1740, which will eventually expand to the Council of Churches of America when you get the College changed to a University.

I think we should hear from Poly graduates come to Texas - because
1. The small farms are down and out due to the fact the small independent farmers refuse to go along with all the Business.
2. We need that something in Poly graduates which transforms the impossible into an act of possible and a hard.
3. In Texas you will see on these clean, crop boys, becoming bilingual - that the Mexican's mother tongue - Spanish, and they also speak and write perfect English.
4. Young people become graduates of Poly could contribute the spirit (of that which has today transformed Texas) into the life of Texas before youth who have
not seen anything here in Texas.

you could discharge the principal's office, I teaching in the work
here and in Texas is this P.R.,

would not be an even expanding depart-
ment or department as Poly will be
if Poly gives attention to the needs of
Poly's great field for training Christian
leaders in all the many vocations of
man. P.R. has infinite objectives and

a great evangelistic home on the farm of

airplanes will, with
Poly's passenger planes, be only a few minutes
from Poly & P.R.

I am just P.R. in operation under com-
petent of instructors and receive an
Administrative Committee for operational services
This would give Poly another department in its university idea according to Poly

charters. It will not cost outside contributions
for support, once it is in operation. If

would certainly be able to contribute finan-

cial support somewhat to Poly, and
might supply you with meat for your

connomous and faculty needs... maybe
beans and other vegetables at a cost
attractive to Poly.

Poly's greatest field is to supply the
right kind of leadership for Texas' in-
creasing development. In doing this you will also gradually ex-

and thereby P.R. without selecting
a new name that might offend their

Poly. Poly's field additional to what
P.R. or T.R.C. offers, you can in
Poly give attention to manual labor and

personal religious and training of a
practical Christianity.

I feel sure you are capable in

an educational need to supply the
leadership Poly has received.

The time for a changed name
for Poly, I mean get a name that shows
for what Poly was founded and you have

responded. God bless you daily.
This sheet is strictly a whisper.
Your ear, which I hope meets approval of Ethel and acceptable by you.

Only found two disturbing things that might disrupt your life of

1. Work—You cannot work too hard while your work is in and out of your office. But you can work too

   long. Make 8 hours the limit except for emergencies. Be careful but

   emergencies do not become daily or

   weekly occurrences. People love & talk
to you. "Smile and the world smiles with you.

   Think and you think alone. The cheerful smile will get you in

   where the bread is warn there."

   Yours,

   Ethel.

In this I mention for short your long

   years of useful service for you as President

   of Texas.

   At 2 P.M. in honor of Ethel. I should

   see you every day. Find out what causes

   it and face the dangers with all your

   strength.

   Yet have wonderful resources and I believe

   well-proven...

   You are a "classic example" and many
do not realize it.

   For the sake of Ethel—Try this.

   Consider the effect of this on your own life,
or upon the life of students and society.

   Stop it while you are still strong physically,

   happy, or well. In my descent from

   workers—was not to be that year but years of service from one of the best men

   who has come to Texas and Texas in

   Texas in Texas. He has shown to much a

   physical condition due to...health

   doctor told him he had to drink, before
taking a glass of bourbon—alcohol, etc. it is.

   I can't better things from you during the

   coming years. Ethel has helped you win. It is

   my only hope you and Ethel have this.

   Ethel Harris.
Smoke & Cancer

Where there's smoke, there's cancer. This is true of both cigarette smoke and automobile exhaust fumes. University of Cincinnati scientists reported last week Dr. Clarence A. Mills, of a father-daughter research team (the other member: Dr. Marjorie Mills Porter), reported that "tobacco smoking is unquestionably and significantly related to increased lung-cancer incidence" and also that "heightened lung-cancer rates in every smoking category are further sharply increased for suburban Cincinnati men traveling 12,000 miles or more a year in motor traffic."

The Mills team checked 1,910 men and women and tracked down 531 recent deaths from lung cancer (with which they lumped cancers of nearby parts of the respiratory tract). They arrived at this breakdown: regardless of where a man lives, the smoking of pipes and cigars doubles or triples his risk of lung cancer; "moderate" cigarette smoking (16-25 cigarettes a day) multiplies the risk by four to six; heavy cigarette smoking by ten to 20. However much he smokes, a man who drives 12,000 or more miles a year in heavy traffic is exposed to exhaust fumes that multiply his risk of lung cancer by as much as two or three. And the rate is doubled for those who live in smoke-polluted, downtown areas like Cincinnati's "Basin" district. A heavy-smoking cab driver who lives there multiplies his danger by all these factors and runs a risk of lung cancer 40 to 120 times greater than that of a nonsmoking farmer.

As for the much-touted sex difference, the Drs. Mills found none. Women in city, suburb and country had about the same lung-cancer rates as nonsmoking men in the same areas. They concluded that the rate appears lower in women because fewer pick the combination of heavy smoking and driving in heavy traffic.
